

CORNREMOTE

ARE YOU LAZY?

THIS DEVICE IS MADE FOR YOU!

With the integration of Makey Makey to your popcorn bucket you can control your film remotely while you're eating, even if you are away from your computer. The concept is simple, sit comfortably on your couch and press the buttons on the sides of the bucket to control the movie.

PROJECT DESCRIPTION

WHAT ARE THE INGREDIENTS?

This project consists of a popcorn bucket with buttons on the sides programmed on Makey Makey. With these buttons, the user can stop and play the movie, turn the volume up and down, fast forward 10 seconds and rewind 10 seconds.

Target: Individuals who love streaming movies or series at home and want a device that enhances remote control capabilities while managing snacks, particularly popcorn.

Benefits: Enhances cinematic experience by allowing users to remotely control the movie playback even when away from the PC. This provides seamless flexibility. The remote control adds a layer of convenience and comfort, transforming the home entertainment experience into a more relaxed and engaging occasion.

Drawbacks: Considering the need for regular snack handling, it's important to note that the device's material may be susceptible to getting soiled, which could potentially affect product durability. The product has a limited mobility due to wiring.

Future Improvement: Newer product developments may explore the possibility of using silicone for washability and bluetooth for better mobility. This would require additional investments and could be considered an upgrade in subsequent versions.
